

Announcement

Date: April 17, 2018

The change of structure

We announce the structure on Prism Pole E / EV series is changed to the following;

With a renewal of a deteriorated mold, joint shape and inside stopper part structure have been changed.
To prevent the pole from rolling too much, dodecagon shape is adopted. In addition, the change of inside stopper part structure leads to improvements of repairability and the fixing force.

Previous structure

New structure

The point to be changed

- Joint shape
Round ➔ Dodecagon
- Inside stopper part (as shown below)

Left :Previous
Right :New

- Built-in circular level (EV series only)
