## Myzox's Prisms

What is aprisme

#### Abstract

Prisms are optical polyhedrons made of glass that are meticulously polished to achieve a smooth and transparent surface. They are utilized to disperse, refract, and achieve total internal refilection of light. Additionally, prisms play a crucial role in distance measurement using total stations. By precisely reflecting the emitted light back to the instrument, prisms enable accurate distance calculations and surveying operations.

## Silver Coating

By applying a silver coating to the prism surface, the reflective properties are enhanced, allowing for a wider measurement angle range. This means that the prism can accurately reflect and transmit light within a broader range of incident angles.

Myzox prism coating

Prevents corrosion
from moisture.
from moisture.

Silver coating provides the highest reflectivity among metals, making it the most suitable for total stations. Silver coating has over $98 \%$ reflection rate at the range.

## Prism Constant

The measurement distance is not simply the distance to the prism reflection point (pic.1) or the tip of the prism (pic.2). When a laser is emitted from a total station, it reflects three times within the prism (pic.3). The speed of the laser inside the prism is slower than in the air. Taking into account the calculated distance, laser speed, and refraction rate inside the prisms, the actual measurement point is located behind the prism position (pic.4).

## Angle Error

The prism has to be aligned perfectly to the line of sight of the total station. When aligning the instrument, it is important to align not only the center of the prism but also the tip of the probe, pole and shoe for more precise measurement results. The angle error occurs when the collimation position of the total station deviates from the target point position.

## Aligned

## Not aligned

## Distance Error

The speed of light in the prism is slower than in the air. When the alignment is not correct, the optical path becomes longer, resulting in distance measurement errors. Therefore, to minimize the errors, it is necessary to align the instruments properly.

## New 360 degree Reflecting Prism REV0360

## R-360

MUCH-ANTICIPATED $360^{\circ}$ PRISM
Imposing body by shaving off the aluminium block.

- FEATURES

## Replaceable Prism

Each prism is independent. It means those prisms are non-glued. In case the prism is broken, it is replaceable at a minimum loss.

This structure saves money for users or renting business companies. (No need to buy new prism)

Compatible with 9 mm Pin Pole
REVO360 have 6 mm screw at the top and bottom. 6 mm screw is used for $9 \mathrm{~mm} \phi$ pole, which is widely distributed.

## LED Flashing Prism Target <br> LED30

HIGH VISIBILITY BY LED FLASHING
LED30 has 4 LED lights on the prism target．
It＇s useful to use at night works，mining site and long distance works and so on．

Shock proof

Water proof IP54

## CHECK

## LED FLASHING

LED30 helps at night works，mining site or long distance works and so on． Because LED lights indicate clearly where the prism is by its flashing．

It＇s easy to change the brightness and frequency by switching the button at back side of prism target．
Selection of Brightness ：100\％，70\％，40\％，20\％
Frequency of Flashing ：1hz，3hz，6hz，and lighting
＊When setting as prism constant 0 ，it must be used with the attached adapter，LA－0．
